

Requirements Document: FaithForge AI Contract Opportunity Screening and Packet Builder

1. Project Name

FaithForge AI Contract Opportunity Screening and Packet Builder

2. Purpose

The purpose of this AI tool is to review incoming emails, identify contract opportunities relevant to FaithForge, notify the user of potential matches, and allow supporting contract documents to be uploaded manually when access requires logging into the EMMA website. Once documents are uploaded, the AI will review the materials, build a relevant response packet, and email the packet to the user for review.

3. Business Need

FaithForge receives contract opportunity emails that may include public sector, nonprofit, education, healthcare, training, workforce development, technology, or consulting opportunities. However, some contract documents cannot be accessed directly through email links because they require logging into the EMMA website. The tool must sort relevant emails first, then allow the user or assigned team member to upload the solicitation documents manually.

4. Scope

In Scope

The AI tool will:

- Connect to the user's email inbox.

- Scan emails for contract-related opportunities.

- Identify opportunities that align with FaithForge's services.

- Categorize emails as relevant, possibly relevant, or not relevant.

- Extract key opportunity details from the email body.

- Flag opportunities requiring EMMA login.

- Provide a manual upload area for solicitation documents.

- Review uploaded documents.

- Build a contract opportunity packet.

- Email the completed packet to the user for review.

Out of Scope

The AI tool will not:

- Automatically log into EMMA unless approved in a future phase.

- Submit proposals automatically.

- Make final bid/no-bid decisions without user review.

- Sign documents or agreements.

- Access protected contract documents without proper user-provided uploads.

5. FaithForge-Relevant Opportunity Areas

The AI should prioritize opportunities related to:

Project management support
Program management support
PMO services
Business process improvement
Training and workforce development
Curriculum development
Professional development
Certification programs
Grants management
RFP response support
Technical writing
Business consulting
Strategic planning
Nonprofit support services
Education support services
Healthcare training or administration support
IT project management
AI automation
Digital transformation
Vendor management
Contract management
Compliance support
Change management
Administrative and operational support
Community-based programs
Faith-based or nonprofit service delivery

6. Email Keywords to Search For

Contract and Procurement Keywords

The AI should look for:

RFP
RFQ
RFI
IFB
Solicitation
Bid opportunity
Proposal request

Procurement
Contract opportunity
Vendor opportunity
Request for proposal
Request for quote
Request for information
Notice of funding opportunity
NOFO
Grant opportunity
Task order
Master agreement
Blanket purchase agreement
Consulting services
Professional services
Scope of work
Statement of work
SOW
Proposal due date
Pre-bid conference
Addendum
Award notice
Intent to bid
Subcontractor opportunity
FaithForge Alignment Keywords
The AI should prioritize emails containing:
Training
Workforce development
Professional development
Certification
Curriculum
Learning management
Instructional design
Program management
Project management
PMO
Business analysis
Process improvement
Technical assistance
Compliance
Grant management

Nonprofit
Education
Higher education
School system
Healthcare
Hospital
Community services
Outreach
Administrative support
Strategic planning
Change management
Technology implementation
Digital services
AI
Automation
Proposal writing
RFP response
Vendor management
Contract management
Maryland/Public Sector Keywords
The AI should also flag:
EMMA
Maryland Marketplace
State of Maryland
MDOT
Maryland Department
County government
Baltimore County
Prince George's County
Montgomery County
Anne Arundel County
Howard County
Local government
Public school system
Community college
University system
Health department
Human services
Department of Education
Department of Health

7. Email Screening Rules

The AI should classify each email as follows:

Relevant

An email should be marked relevant if it includes contract/procurement language and aligns with at least one FaithForge service area.

Possibly Relevant

An email should be marked possibly relevant if it includes contract/procurement language but the service area is unclear.

Not Relevant

An email should be marked not relevant if it is unrelated to FaithForge services, outside business scope, spam, unrelated sales marketing, or not a procurement opportunity.

8. Information to Extract from Relevant Emails

For each relevant email, the AI should extract:

Opportunity title

Agency or organization name

Solicitation number

Due date and time

Pre-bid meeting date

Submission method

Contact person

Email address

Website link

EMMA link, if applicable

Opportunity summary

Required services

Recommended next action

Relevance score

Risk or concern

Document upload status

9. EMMA Document Handling Requirement

Because contract documents may not be accessible without logging into EMMA, the AI should not attempt to bypass login requirements.

Instead, the system should:

Identify emails that include EMMA links.

Mark the opportunity as "Documents Required."

Notify the user that documents must be uploaded manually.

Provide an upload area for solicitation files.

Accept uploaded files such as PDF, Word, Excel, and ZIP files.

Confirm when documents have been uploaded.

Begin document review only after upload is complete.

10. Uploaded Document Review

Once documents are uploaded, the AI should review them and extract:

Solicitation title

Agency name

Scope of work

Eligibility requirements

Required qualifications

Required forms

Submission checklist

Proposal format

Evaluation criteria

Due date

Questions deadline

Insurance requirements

Certifications

Compliance requirements

Pricing requirements

Required attachments

Disqualifying requirements

FaithForge fit assessment

11. AI-Generated Contract Packet

After reviewing uploaded materials, the AI should create a packet that includes:

Opportunity summary

Bid/no-bid recommendation

FaithForge fit analysis

Required documents checklist

Proposal response outline

Compliance checklist

Due date tracker

Key risks

Questions for the agency

Draft response strategy

Recommended internal owner

Next steps

12. Email Delivery Requirement

Once the packet is complete, the AI should email the packet to the user for review.

The email should include:

Subject: FaithForge Contract Opportunity Packet Ready for Review

Body should include:

Opportunity name

Agency name

Due date

Relevance score

Summary of the opportunity

Recommended decision

List of attached packet documents

Requested user action

The packet should be attached as a PDF or Word document.

13. User Review Requirement

The AI must not submit anything directly. The user must review and approve all final decisions and proposal materials.

14. Security and Privacy Requirements

The tool must:

Protect email access credentials.

Avoid storing unnecessary email content.

Secure uploaded documents.

Limit access to authorized users.

Maintain an audit log of reviewed opportunities.

Allow users to delete uploaded files.

Avoid sharing contract materials externally without permission.

15. Dashboard Requirements

The tool should include a dashboard showing:

New opportunities

Relevant opportunities

Possibly relevant opportunities

Documents needed

Documents uploaded

Packet in progress

Packet ready for review

Due dates

Bid/no-bid status

16. Status Labels

Each opportunity should have one of the following statuses:

New

Under Review

Relevant

Possibly Relevant

Not Relevant

EMMA Documents Needed

Documents Uploaded

Packet Building

Packet Ready

Reviewed by User

Approved to Pursue

Declined

17. Success Criteria

The tool will be successful if it:

Reduces manual email review time.

Accurately identifies FaithForge-relevant opportunities.

Prevents missed contract opportunities.

Creates organized opportunity packets.

Helps the user make faster bid/no-bid decisions.

Supports future RFP response automation.

18. Future Enhancements

Future versions may include:

Direct EMMA integration, if allowed.

Automated calendar reminders for due dates.

Proposal draft generation.

Team assignment workflow.

CRM integration.

Past performance library.

Capability statement matching.

Pricing template support.

Automated RFP response drafting.
